United States Patent awarded to Sterling Water Systems, LLC for the Sterling Water Conditioner

Wichita, KS – Sterling Water Systems, LLC, the pioneering manufacturer of the safe, effective and environmentally responsible water conditioner, announced today that it has been issued the US Patent 7,250,110 which covers electro-kinetic water conditioning technology used in the ICT and HW Series.

About Sterling Water Systems, LLC

Sterling Water Systems, LLC, a subsidiary of Porta Via Water Company, LLC, located in Wichita, Kansas is the manufacturer of Sterling Water Conditioners. Sterling Water Conditioners and RO Systems are sold throughout parts of the United States and Canada through local distributors. In areas where there are no local distributors, retail sales of Sterling Water Conditioners and RO Systems are handled by the Good Water Company which has been providing a broad range of water treatment and purification solutions for residential, commercial and industrial customers since 1984.

Each Sterling Water Conditioner utilizes advanced materials and electro-kinetic technology to keep mineral particles from attaching to pipes, fixtures and surfaces, reducing the undesirable effects of hard water.

Working in conjunction with Wichita State University and by combining advanced technologies and innovative design, Sterling Water Systems is setting the true standards of quality and value.

The Sterling Water Conditioner, utilizing its patented technology, is the first water treatment appliance to pass the anti-scale performance and testing requirements contained in IAPMO's IGC 91. Our products are UPC and ETL listed and compliant with NSF and UL regulations.
